

**Building Name: City House**

**Address: 36 Robinson Road, Singapore 068877**

City House is a 23-storey office building with a basement.

With good management and maintenance, coupled with the implementation of new technology, CDL has been enhancing energy-efficiency by making the building more eco-friendly. Some of the recent improvements implemented for City House are as follows:

- Replaced the chiller system to further improve energy efficiency.
- Replaced the building automation system to achieve chiller and cooling towers optimisation and better control of equipment and lightings.
- Incorporated CO2 sensors in the air distribution system to modulate the amount of fresh air requirement so as to maintain good IAQ and reduce unnecessary load.
- Installed ultrasound sensors in toilets and staircases to reduce energy consumption.
- Installed daylight sensors in areas where there are daylight to reduce energy wastage.
- Conserve water resources by adopting the water efficient flow rates/flush volumes at water-fittings.

With continuous effort and efficient management, City House has achieved the Energy Smart Office Award in 2005 and Green Mark Gold Award in 2008. It was also awarded the PUB Water Efficient Building in 2008.

City House has also been certified with ISO 14001 and ISO 9001 in 2007 for property management.
